TITLE: Tashkent Institute for Engineers of Irrigation and Mechanization of Agriculture (Tashkentskiy institut inzhenerov irrigatsii i mekhanizatsii sel'skogo khozyaystva)

PERIODICAL: Gidrotekhnika i Melioratsiya, 1958, # 3, pp 39 - 41 (USSR)

ABSTRACT: Tashkent Institute for Engineers of Irrigation and Mechanization of Agriculture (TIIIMSKh) founded in 1934, is one of 50 vuzes that were established after the October Revolution. At present, it is composed of following faculties: hydro-melioration; mechanization of agriculture; soil cultivation; a special faculty of mechanization of farm operations for managers and chief engineers of MTS, and a faculty for correspondence courses. At present, there are 276 teachers, among them: Academician of the Uzbek SSR Academy of Sciences, Professor E.N. Kary-Niyazov; Member-Correspondent of the same Academy, Professor S.T. Altunin; Member-Correspondent of VASKhIL, Professor N.A. Yanishevskiy, and Professors V.F. Bulayevskiy, G.A. Koshevnikov, A.N. Gostunskiy, E.Kh. Uzenbayev and others. The institute published 465 scientific works and many technical textbooks.

"Concerning Five-Year Plans in Collective Farms," A. Kaminskiy, P. Sukach,
Candidates in Agricultural Sciences, 8 pp

"Sots Sel Khoz" Vol XVIII, No 12

Discusses five-year plans which individual kolkhoz have established for themselves, thereby increasing efficiency and productivity of labor in fulfillment of national Five-Year Plan. Names specific kolkhoz and certain points of their plans as examples. Gives 14 basic points of a typical kolkhoz five-year plan, covering administration, organization, sowing, agricultural measures, tractors and other mechanical traction, grain and livestock development, development of subsidiary branches of enterprises, construction, manpower, specialized training of personnel, determination of over-all production, finance, housing, and index of results of five-year plan.

TITLE: Welding the cylinders of steam turbines made of perlite class 20KhMFL (20KhMFL) and 15Kh1M1FL (15Kh1M1FL) grade steel

PERIODICAL: Referativnyy zhurnal, Metallurgiya, no. 6, 1961, 15, abstract 6E102 (V sb. "N-ovyye vopr. tekhnol. proiz-va turbin", Tr. Leningr. metallich. fa, no. 7, Moscow-Leningrad, 1960, 248 - 253)

TEXT: Heat-resistant grade 20KhMFL and 15Kh1M1FL steels of the perlite class are employed for the manufacture of steam turbines with high steam parameters. The welding of structural joints and the welding-up of defects were carried out with УЛ-20 (TsL-20) (for 20KhMFL steel) and УЛ-27 (TsL-27) (for 15Kh1M1FL steel) electrodes. During the welding process the joints in the layers were trimmed. Heat treatment is recommended immediately after welding. If this is not possible the parts are heated to 400-500°C directly after welding and held at this temperature for 4 - 5 hours. The parts are then cooled during 16 - 20 hours down to the temperature of the surrounding medium.

COVERAGE: The experience of the LMZ (Leningradskiy metallicheskiy zavod - Leningrad Metalworking Plant) in the manufacture of modern large-capacity turbines is presented. Methods for the rationalization of basic manufacturing processes and for the mechanization and automation of manual operations are given. Descriptions of attachments and tools designed by LMZ for improving labor productivity and product quality are provided, and advanced inspection methods discussed. References accompany some articles. No personalities are mentioned. There are 26 references: 25 Soviet and 1 English.

PURPOSE: This collection of articles is intended for engineers and technicians of metallurgical and machine-building plants, senior students of schools of higher education, staff members of design bureaus and planning institutes, and scientific research workers.

COVERAGE: The collection contains reports presented at the fifth annual convention devoted to the review of the physicochemical bases of the steelmaking process. These reports deal with problems of the mechanism and kinetics of reactions taking place in the molten metal in steelmaking furnaces. The following are also discussed: problems involved in the production of alloyed steel, the structure of the ingot, the mechanism of solidification, and the converter steelmaking process. The articles contain conclusions drawn from the results of experimental studies, and are accompanied by references of which most are Soviet.

SUMMARY, V. N.

USSR/Agriculture

Card 1/1

Author : Sukachev, V. N. Academician

Title : Basic problems of science regarding forestry and agriculture

Periodical : Priroda, 5, 3-11, May 1954

Abstract : The September session of the Central Committee of the Communist Party of the USSR developed a concrete program for absolute increase in the productivity of agriculture and forestry, in order to increase the supply of farm goods and raw materials for industry. The program calls for absolute increase in the production and delivery of consumer goods. The agricultural groups are urged to make full use of new soils and waste land and to make good use of the raw material (timber) and other forest products (nuts, berries, mushrooms, furs, etc). Forest grasses should be utilized as animal fodder. Science is requested to lend its helping hand in developing and increasing farm and forest productivity.
